

CEILING SPONGE FLOAT

200 x 400 mm

NEW IN OFFER

MADE
IN POLAND

CEILING SPONGE FLOAT is designed to finish grainy surfaces such as sand and cement mix, or for applying certain plaster finishes. Coarse sponge rubber pad with a thickness of 18 mm enables easy removal of dirt, and at the same time, thanks to its porous structure, keeps water in it. The swivel attachment allows the work with an extension pole, thanks to which access to hard-to-reach places such as high walls or ceilings will be much easier.
