

STAINLESS STEEL TROWELS

WITH POLYAMIDE SHANK

NEW IN OFFER

MADE IN
POLAND

STAINLESS STEEL TROWELS with polyamide shank are designed to work during the application of gypsum finish coats as well as mortars and adhesives. The non-corrosive polyamide shank reduces the weight of the tool, and at the same time is as durable as aluminium shank. The smooth surface of the tights prevents materials from sticking to them. Ergonomic handle provides a firm grip. Available in a standard and square notched version.

SQUARE NOTCHED TROWELS
