

BENT POLE SCRAPER

75 mm

Designed for heavy duty scraping on walls, floors and other surfaces that other tools are not up to, this 3" (75mm) scraper features a heat treated high carbon steel blade with a chiseled edge to effectively get underneath the material being scraped. A screw thread at the end of the handle enables it to be mounted onto any our extension pole to generate additional power and enable even the most difficult places to be reached without ladders or platforms. The head is angled which gives clearance for knuckles when hand scraping. Featuring a rugged handle with molded finger grips for comfortable working and reduced hand fatigue, it is ideal for a wide range of tough tasks including removing wall and floor tile grout, adhesives/glues, silicones and sealants, stripping wallpaper, scraping wood, metal and plaster surfaces, lifting vinyl flooring, general building work and more.

**THREADED HANDLE TO ATTACH TO THE
POLE FOR HARD TO REACH AREAS**

**STEEL FERRULE
PREVENTS FROM
DAMAGE BY USING
RUBBER Mallet**
